Work Experience

Facebook Seattle, WA

Software Engineer

Summer 2017, August 2018 - Present

- o Designed and implemented an end 2 end solution to manage regressions in Instagram webservers
- Converted a fully manual process to a semi-automated one and saved 50% of engineers' time
- o Collaborated with Facebook's team to unify the regression management platform

Google Irvine, CA

Software Engineer Intern

May 2016 - August 2016

- Developed a feature in Google Analytics 360 Suite to customize the homepage for organizations which enhance resellers' flexibility in interfacing with their clients
- o Automated the 360 Suite's Angular 2 migration with scripts and cut engineering time by 30%
- Worked with the Angular 2 team to formulate and implement best practices within the application

Gweepi Medical North Andover, MA

Software Engineer Intern

June 2015 - May 2016

o Provided a mobile application to 3000 aides at 25 nursing homes to document residents' activities

• Extended data collection model and developed fully-tested data presentation views

EDUCATION

University of Massachusetts

Amherst, MA

Sept. 2014 - Dec. 2017

B.S. in Computer Science

○ GPA: 3.96 - Dean's List (All semesters)

• Relevant coursework:

 ${\bf Information~Systems-Cited~for~"near~perfect"~scores}$

Combinatorics & Graph Theory

Machine Learning - Cited for outstanding work

Introduction to Computation – Cited for $5^{\rm th}$ highest scores Introduction to Algorithms

Artificial Intelligence – Cited for being 1st out of 96

PROJECTS

Vehicle Sensor, Localization, Control

USA

Udacity Self-Driving Car Nanodegree

Summer 2018

- o Implemented Kalman Filters and Particle Filters to localize vehicles in a map using a fusion of Radar and Lidar data
- $\circ~$ Worked with PID and MPC controller to drive a car autonomously
- Used Coordinate Descent algorithm to tune MPC controller

Vehicle Deep Learning

USA

Udacity Self-Driving Car Nanodegree

Spring 2018

- o Implemented different modules to predict lane lines, steering angles, traffic signs and vehicle bounding boxes
- o Analyzed and preprocessed raw image data with Computer Vision techniques before fitting various Deep Learning models
- \circ Tuned the pipeline end 2 end, incorporating different techniques like transfer learning and postprocessing false positives

Dota Winrate Amherst, MA

CS589 Machine Learning

Spring 2017

- \circ Dota 2 is an online multiplayer game in which 2 teams draft different characters and battle each other
- $\circ~$ Crawled the public API and preprocessed match datas with the Producer & Consumer concurrency pattern
- $\circ \ \ \text{Predicted win loss based on team lineups at 80+\% accuracy on the test set by engineering features with domain knowledge}$

Informant | 2nd place out of 50, silver MLH medal

New York, NY Fall 2015

Spring 2016

 $\circ~$ Made a Chrome extension to provide contextual information to YouTube videos

- o Developed a Node.js server to process data and communicate with the extension
- o Leveraged Project Oxford to do facial recognition on celebrities

Prepper Amherst, MA

CS326 Web Programming

• Used MongoDB, Node, and React to build a web platform for interview prep, in a team of 6

- o Integrated video call using WebRTC protocol
- o Independently developed Google Map markers, notifications, and chatrooms for Honors program

SKILLS

HackNY

- Proficient: C++, Python, Javascript, Shell, Hack, React
- Familiar: Keras, OpenCV, Java, Tensorflow, Android, HTML, CSS
